

SCHAEFFLER

A photograph of a large industrial building at dusk. The building's facade is dark, but the windows are lit up, showing interior lights. Above the building, the word "SCHAEFFLER" is displayed in large, three-dimensional, green letters that are illuminated from within. The sky above is a mix of deep blue and purple, with some clouds. The overall scene is a dramatic representation of the company's industrial presence.

Schaeffler - A Leading Global Technology Company

The Schaeffler Group is a global automotive and industrial supplier. Ensuring top quality, outstanding technology, and an exceptional innovative spirit form the basis on the Group's continued success.

With over 92,500 employees, the Schaeffler Group is one of the leading global technology companies. Its network of manufacturing locations, research and development facilities, and distribution networks are spread over 170 locations across 50 countries. The Group's strength of 74 production facilities is the cornerstone of its operations.

The Schaeffler Group is actively shaping technological progress with its 20 R&D centres across the globe. Its 26,600 patent registrations, filed with the German Patent and Trademark Office, make the Schaeffler Group one of the most innovative companies.

Schaeffler AG, the Group's lead company, is a publicly listed stock corporation incorporated under the German law with its registered office in Herzogenaurach.

Mission

Guided by the values of a global family business, we work closely together with our customers as true partners to deliver a compelling value proposition through our best-in-class expertise in manufacturing technology and systems know-how. In doing so, we contribute to the success of our customers, the advancement of our employees, and the prosperity of our society.

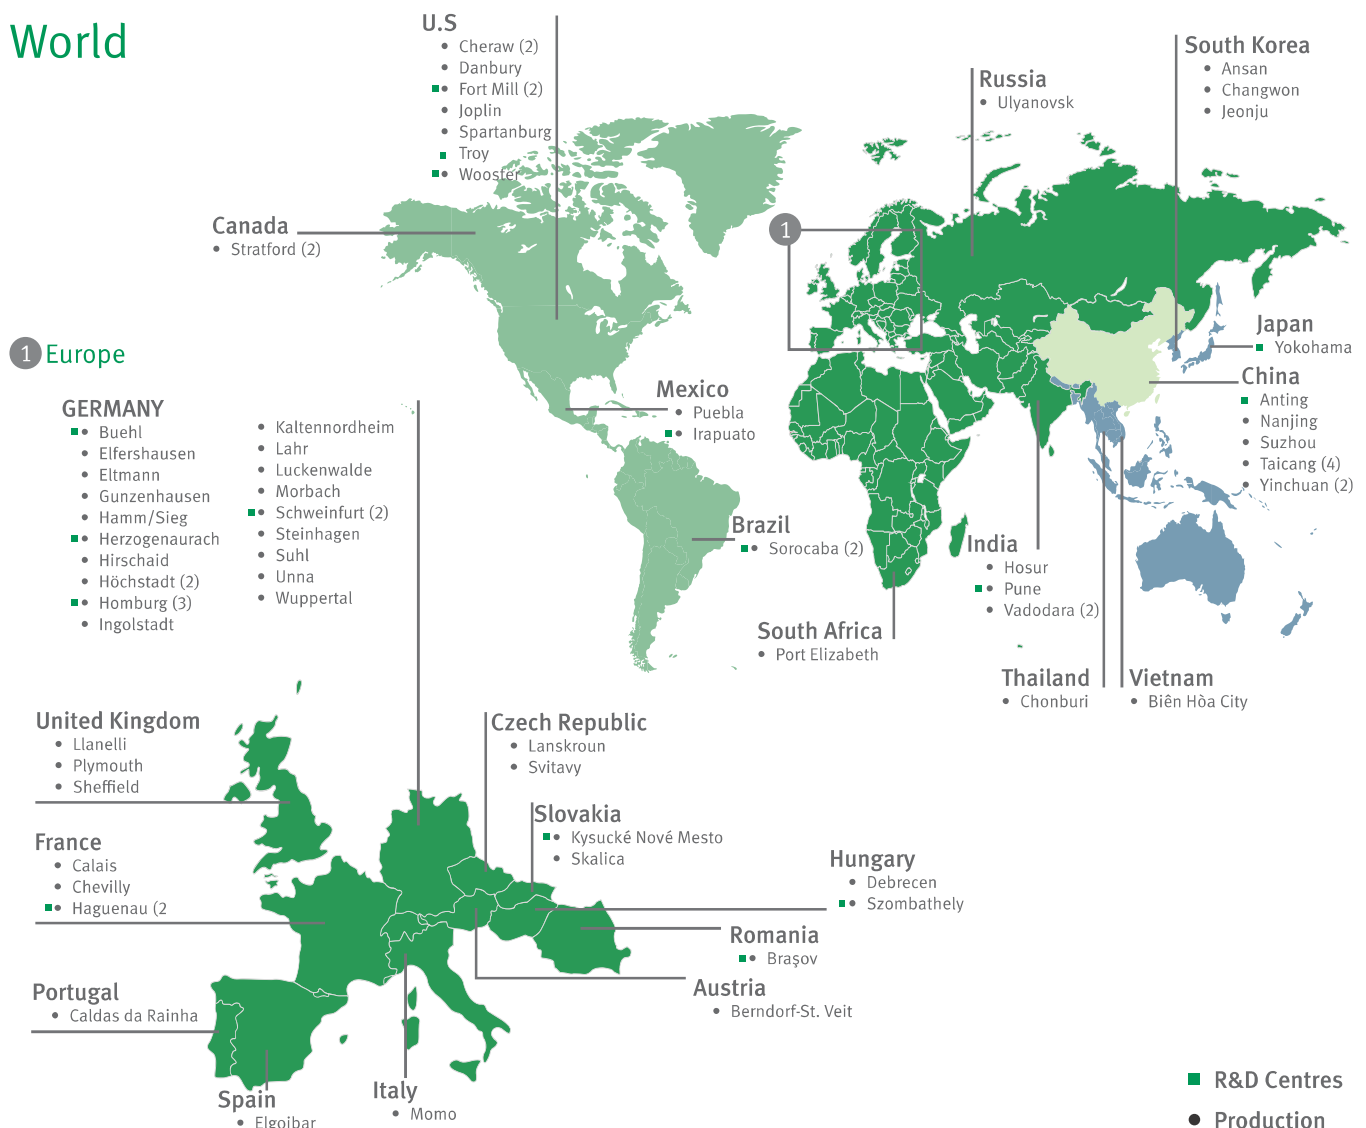

Vision

As a leader in technology, we combine a passion for innovation with the highest standards of quality to shape the future of mobility - for a world that will be cleaner, safer, and smarter.

World

Group Strategy for Growth: Mobility for Tomorrow

As a leading player, Schaeffler Group is cognisant of the global evolutions and digital transformations impacting the industrial and automotive businesses. The Schaeffler Group has shaped the strategy of Mobility for Tomorrow as its long-term approach towards addressing the major challenges and opportunities it faces.

4 Focus Areas

Our strategy Mobility for Tomorrow encompasses four main elements.

Eco friendly drives

Maximum energy efficiency and the lowest possible emission values are required wherever mechanical movement is generated.

Schaeffler India is focused to develop and produce components and systems for optimised internal combustion engines, as well as for hybrid and electric drives.

Urban mobility

New mobility concepts, based on the intelligent combination of individual vehicles with public transportation services, are rapidly gaining acceptance.

Schaeffler India is on track to deliver its expertise for two-wheelers and personal mobility solutions.

Interurban mobility

Increasing rail and air transportation requires innovative technological solutions.

Schaeffler India offers wide range of passenger and freight mobility solutions, aircrafts and off-highway segment.

Energy chain

Climate protection can only be achieved if the entire energy chain from generation to transport to use is continuously optimised.

As one of the leading partners of the energy industry, Schaeffler India supports the expansion of efficient energy generation.

E-Mobility

Drive systems and concepts for today and tomorrow

90°

is the maximum wheel cut of all four wheels of the Schaeffler Mover. This enables turning on the spot.

Schaeffler is a system supplier of clean drives and innovative concepts of tomorrow. Offering a flexible and zero-emission platform for a wide variety of vehicle concepts, the Schaeffler Mover urban vehicle concept with wheel hub drive is an example of one of these innovations. In addition, thanks to the unique “Drive-by-Wire” system “Space Drive” – a technology from Schaeffler Paravan Technologie GmbH & Co. KG – it enables autonomous driving.

Schaeffler has developed the Bio-Hybrid especially with individual traffic in cities in mind and has even founded its own start-up for the development, production, and marketing of this vehicle. With its width of less than 90 centimeters and zero-emission 250-watt electric drive system, the Bio-Hybrid is allowed to travel on normal bike paths like a pedelec and takes up only a third of the parking space of an automobile. In many countries it may be operated without a driver’s license and closes the mobility gap between bicycles and cars in its two versions, Passenger and Cargo.

Electric drives also make a significant contribution to more environmentally-friendly mobility. In early 2018, Schaeffler established its E-Mobility business division to enhance its expertise in this field. Here Schaeffler develops solutions for a wide range of customer requirements:

48-volt drives: Optimized internal combustion engines will remain the basis for long-range individual mobility. 48-volt drives from Schaeffler enable maximum fuel savings of more than 20 percent to be achieved.

Plug-in hybrid drives: Almost all automobile manufacturers realize plug-in hybrid designs to achieve better fuel economy and reduce CO2 emissions. Schaeffler offers corresponding hybrid modules.

Drives for battery-electric vehicles: In urban regions, particularly in China and Europe, there is a demand for purely battery-electric vehicles. Schaeffler is already offering drive solutions for such vehicles.

Electric axles: Schaeffler’s electric axle provides a pioneering solution for both hybrid vehicles and fully electric vehicles. This means that all-wheel drive can be implemented in hybrid vehicles, too.

Schaeffler uses its participation in the electric racing series, Formula E, to prove its developments in the field of electric drive technology for volume production. The company is the exclusive technology partner of team Audi Sport ABT Schaeffler. The motor-generator unit of the Audi e-tron FE05 race car has been jointly developed by Audi and Schaeffler. In the 2017/2018 season, Audi Sport ABT Schaeffler won the team championship title.

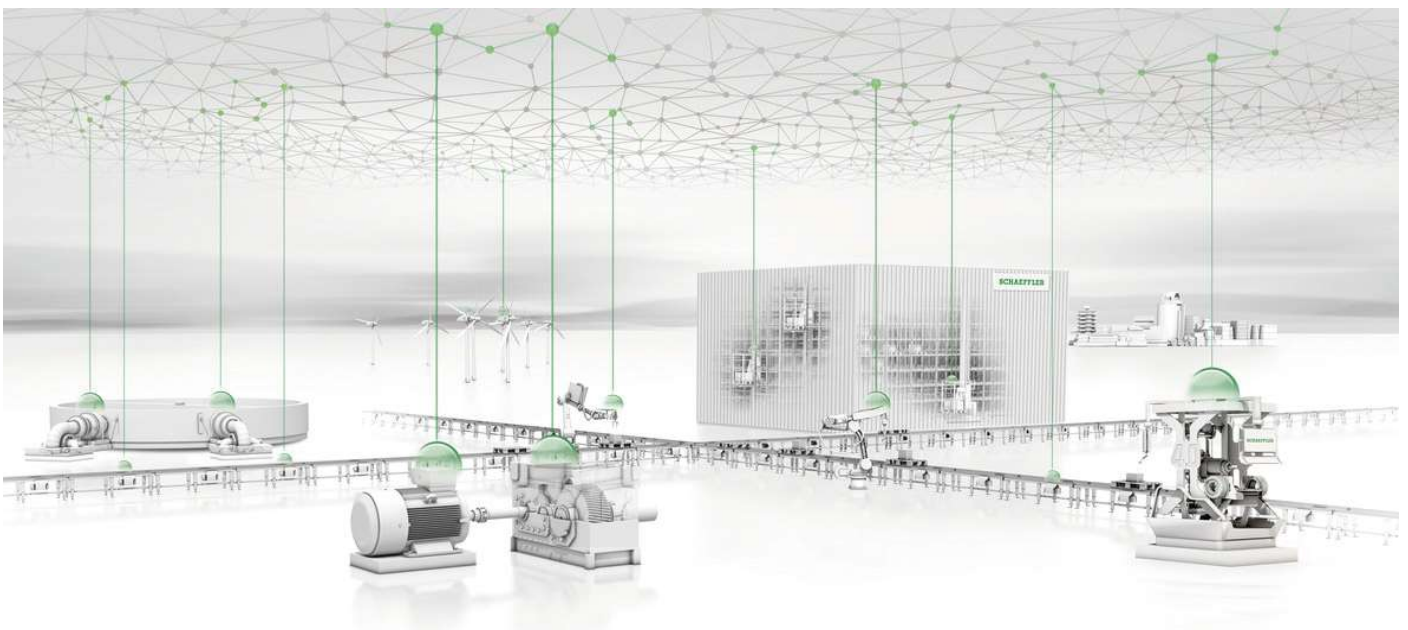

Industry 4.0

Expertise generates added value from data

The world is right in the middle of the so-called fourth industrial revolution, which is having a massive impact on the future of production companies. Industry 4.0 stands for intelligent networks that interconnect product development, production, logistics, customers and suppliers. Its technological basis is intelligent, digitally linked systems that maximize the possibilities for autonomous production and optimized plant operation: Machines, systems, logistics, and products communicate and cooperate with one another directly – just as people do.

A basic requirement in this context is precise knowledge of the machine condition during operation. Here Schaeffler offers a wide range of sensorized components and software solutions that enable the measurement and interpretation of physical quantities during machine operation. On offer to the mechanical engineering sector is the possibility to generate data with the help of integrated sensorized components and measurement technology and achieve “intelligent” machines and systems based on domain know-how. Key components for all Industry 4.0 solutions are Schaeffler’s mechanical expertise and understanding of systems, which go into the generation of models and interpretation of operating data and thus give rise to decisive added value for the customer.

Aimed at the consistent further development of smart and digital solutions, Schaeffler created the “Industry 4.0” business sector at the beginning of 2018, in which it bundles and has been consistently expanding its existing activities and resources ever since. Customers are already using a wide range of such products and services in different project stages. In the next stage, Schaeffler will use this experience to further develop its range of platform-based products and thus respond to customer requirements in a quick and flexible manner.

Digitalization

Shaping the future with the “Digital Agenda”

These days, the value of a car or machine is less and less determined by hardware and software alone. Digital services, based on networked operating data, complement the classic business models in the automotive and industrial sectors. As a supplier to these industries, Schaeffler not only reacts to this trend, but also thinks ahead, as evidenced by its “Digital Agenda” which is an integral part of its “Agenda 4 plus One”. Thus, the company plays an active role in shaping the future. Schaeffler is specifically expanding four pillars on which these business models are based:

Products & Services

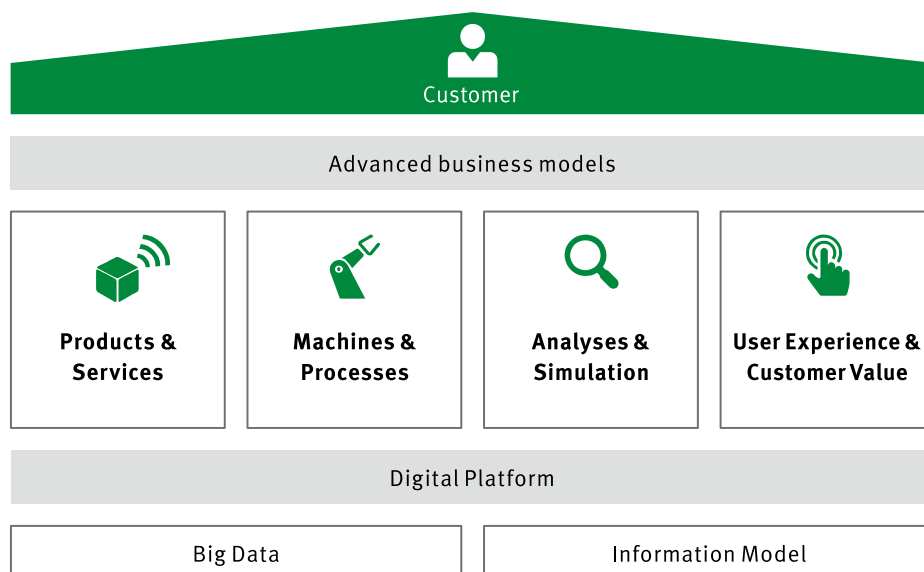

Fitted with sensors, electronics and actuators, bearings and other drive components provide the information required for big data analyses as well as data-based and service-oriented business models founded on networking.

Machines & Processes

Schaeffler sees itself not only as a supplier for smart factories, but also implements new technologies at an early stage in its own production, which is characterized by a high degree of vertical integration. In the future, the company will therefore digitally map the entire product life cycle, from the initial idea to a new product, and from digital production planning to sales management.

Analyses & Simulation

Schaeffler uses real operating data to test innovations before the first prototype is even built and to permanently optimize products throughout their lifecycle.

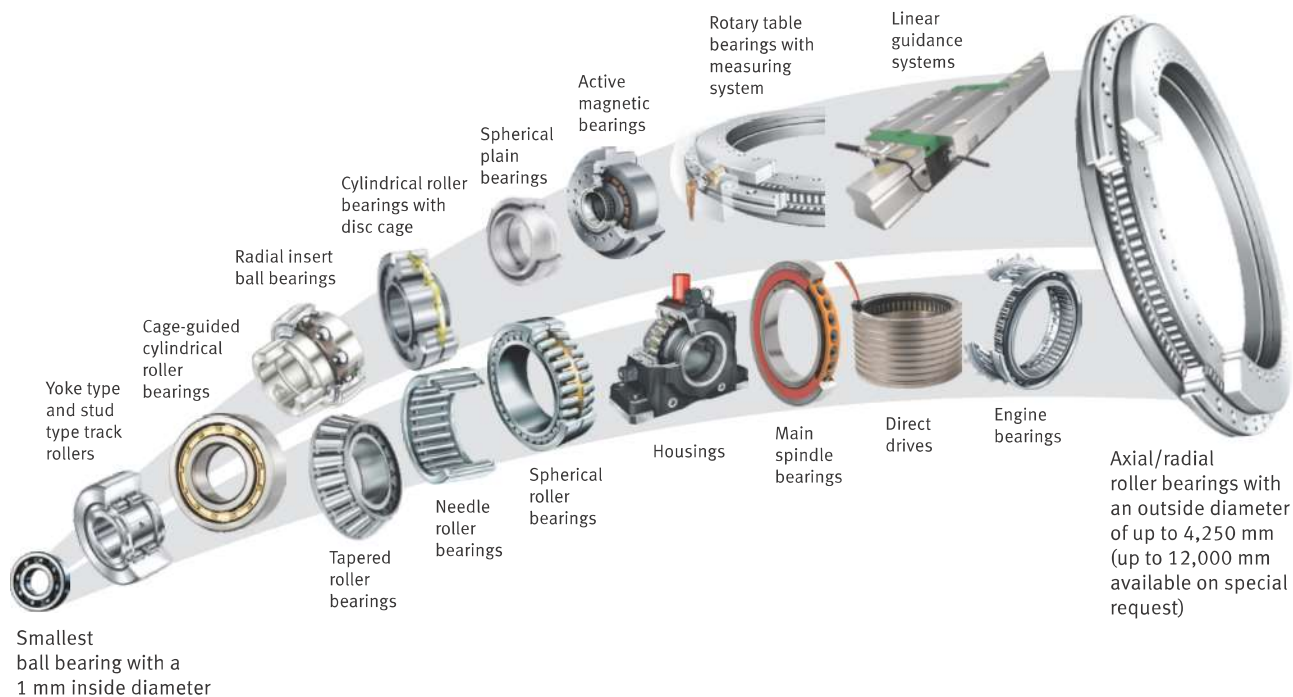

User Experience & Customer Value

Acceptance of digital services also depends on user-friendly operator interfaces. Schaeffler is working to expand its expertise in the optimal design of man-machine interaction. Here, Schaeffler relies on tools such as target group-specific user cockpits that enable or facilitate decision-making.

With its digital platform, Schaeffler has implemented a central data hub that provides the basis for big data analyses. In partnership with IBM, Schaeffler is working to integrate and apply innovative methods, such as artificial intelligence, to products and processes throughout the company.

Industrial division

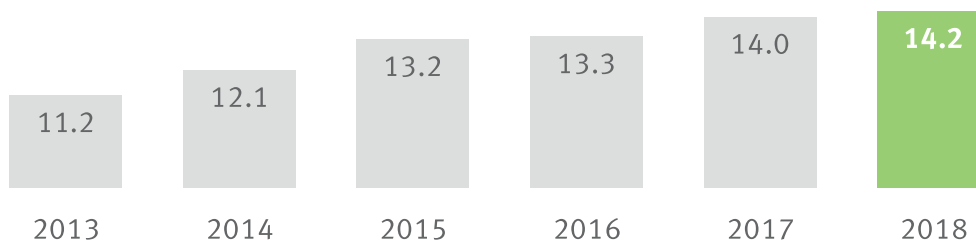

Products and solutions for the industry of the future

From miniature bearings measuring just a few millimeters to large sizes with outside diameters of several meters – Schaeffler's Industrial division supplies around 60 different industrial sectors with rolling bearings and plain bearings, linear and direct drive technology, and a service portfolio including maintenance products, monitoring systems and other solutions. Smart components and digital services are becoming increasingly important.

A worldwide network of sales engineers is available to provide advice to customers from all branches of industry directly on site – whether in agriculture or wind power, whether in the bicycle or steel industry. This extensive support is supplemented by a global network of authorized distributors.

Revenue trend 2013–2018 in EUR billion

Business activities – Industrial division

Mobility

The mobility sector develops rolling bearings and power transmission solutions for bicycles and motorcycles as well as for rail vehicles and agricultural and construction machinery. Schaeffler offers bearing solutions for all types of drives, whether mechanical, electric, or hydraulic. Thanks to its application-specific engineering expertise, Schaeffler covers both stationary and mobile drives for every industrial application, thereby making a decisive contribution towards "Mobility for tomorrow". As a component, the rolling bearing itself is increasingly being transformed into a mechatronic system through the addition of numerous integrated functions, including sensors that generate and evaluate data on driving conditions.

Schaeffler has been an innovative systems partner for the development of industrial automation, such as that used in mobile machinery and metalworking, for several decades. With its rolling bearing, linear technology, and direct drive solutions, Schaeffler offers its customers comprehensive technological and application engineering expertise for complete systems that are precisely suited to the relevant application – all from a single source. In an increasingly dynamic world, Schaeffler's bearings and system solutions help railways prepare for the challenges of the future. Perfectly suited solutions for all bearing applications in rail vehicles are created in close collaboration with manufacturers and operators. For example, Schaeffler is the development partner and sole supplier of axlebox bearing supports for a large number of highspeed train projects.

Energy and raw materials

Renewable energies are set to make a decisive contribution to power supplies in the future. Schaeffler's technological expertise is already on display in products and solutions for hydropower, solar energy, and wind power applications. For example, Schaeffler operates the world's most high-performance large size bearing test rig: AstraioS. The results provided by this test rig lead to further improvements in the understanding of systems as a whole, influencing factors, and the interrelations in the drive trains of wind turbines.

The Schaeffler Group's International Sales, Application Engineering, and Industrial Aftermarket help customers find the right solution for normally "heavy duty" rolling bearing applications in the raw material extraction, preparation and processing, steel and non-ferrous metals, and cellulose and paper industries. The rolling bearing and service concepts developed by Schaeffler extend the lifecycle of machines and reduce the lifecycle costs.

In future, renewable energy will represent a key component of the power supply. Schaeffler's technological expertise is already on display in products and solutions for hydropower, solar energy, and wind power applications. Rotor bearing supports for wind turbines weighing up to 15 tons and measuring up to 3.5 meters can be tested under realistic conditions on a large-size bearing test rig. The test rig results help further improve the understanding of systems as a whole, influencing factors, and the interaction in the drive trains of wind turbines.

Production Machinery

Schaeffler has been an innovative systems partner for the development of production machinery for several decades. This applies to machine tools and machinery for the textile, printing, and food and packaging industries as well as medical technology and electronics manufacturing. In order to increase efficiency and performance, however, it is becoming ever more important not simply to support the subsystems but to integrate important functions such as measurement, sealing, lubrication, and braking into the components themselves. Another trend is the use of direct drives and mechatronic units in production machinery. With its rolling bearing, linear technology, and direct drive solutions, Schaeffler offers its customers comprehensive technological and application engineering expertise for complete systems from one source that are precisely matched to one another.

In close cooperation with customers, Schaeffler engineers find the best solution for the demands of a given application – either with products from the standard portfolio or specifically developed products, with traditional services or with initial digital services. The optimum solution always takes into account the overall system as well as the specific environmental influences and operating conditions of the application.

In the aerospace sector, the Schaeffler Group is a leading manufacturer of high-precision bearings for aircraft and helicopter engines and for applications in space travel. Schaeffler's special bearing systems and high-precision components are used in almost all aerospace applications – from the jet engine of a Boeing or Airbus right up to the propulsion system of the Ariane rocket.

Industrial Aftermarket

Schaeffler Industrial Aftermarket is responsible for the replacement parts and service business for end customers and sales partners in all major industrial sectors. Industrial Aftermarket reduces maintenance and operating costs, increases machine availability, and thus boosts its customers' business success through comprehensive, innovative solutions, products, and services for rolling and plain bearings, as well as by consistently applying the total cost of ownership philosophy (TCO). Saving resources is a factor that is becoming more and more important in this context.

In order to increase machine availability, we also offer a wide range of systems for condition monitoring and also perform remote monitoring for our customers. This means that the risk of breakdowns can be minimized for machines that are difficult to access or critical in the event of a failure, such as cruise ships and wind turbines.

Suffixes and their clarification

Suffix	Explanation	Example
2HRS	Lip seals on both sides	3202-BD-XL-2HRS
2RS	Contact seals on both sides	3312-2RS
2RSR	Lip seals on both sides	3312-B-2RSR-TVH
2Z	Gap seals on both sides	3313-2Z
A	Modified internal construction	62303-A-2RSR
B	Modified internal construction	3214-B-TVH
B	Increased contact angle for Angular Contact Ball Bearings	7205-B-XL-JP
BD	Modified internal construction, contact angle $\alpha = 30^\circ$, without filling slot	3202-BD-XL
C	Modified internal construction in Generation C	6001-C
C3	Radial internal clearance larger than normal	6001-C-C3
DY	Internal Modified Design	30203-DY
E	Increased capacity design	24128-BE-XL
E1	Increased capacity design	22320-E1-XL
EX	Increased capacity design, design modified in accordance with standard	NU2338-EX-TB-M1
HRS	Lip seal on one side	6201-C-HRS
JP	Sheet steel cage	7201-B-XL-JP
K	Tapered bore, taper 1:12	22315-E1-XL-K
K30	Tapered bore, taper 1:30	24030-BE-XL-K30
L140	Special Grease for Electric Motor Application	6011-2RSR-L140
L207	Special Grease for Electric Motor Application	6007-2Z-L207
L285	Special Grease	3202-BD-XL-TVH-L285
M	Solid brass cage, guided by rollers/Ball	3219-M
M1	Solid brass cage, two-piece, roller-guided	NJ2220-E-XL-M1
M1A	Solid brass cage, two-piece, rib-guided on outer ring	NJ2315-E-XL-M1A-C3
MB	Solid brass cage, guidance on inner ring	22236-K-MB
MP	Solid brass cage	7203-B-XL-MP
MPA	Solid brass cage	QJ216-XL-N2-MPA
MPAX	Solid brass cage, single-piece, rib-guided on outer ring	NU1036-XL-MPAX
N	Circular Groover in Outer for Snap Ring	6304-N
N11CA-A..	Two tapered roller bearings matched in an X arrangement, with an intermediate ring between the outer rings. Axial internal clearance in μm	31324-X-N11CA-A140-180
N2	Two retaining slots in outer ring	QJ216-XL-N2-MPA
NR	Circular Groover in Outer with Snap Ring	6210-NR
RSR	Lip seal on one side	6004-RSR
S	Lubrication groove and lubrication holes in outer ring	22328-S-MB
T41A	For oscillating load with restricted diameter tolerances, radial internal clearance C4 Suitable for Vibrating Screen Application	22317-E1-XL-T41A
TB	Bearing with Increased Load Carrying Capacity	NU2338-EX-TB-M1
TVH	Solid cage made from glass fibre reinforced polyamide 66	108-TVH
TVP	Solid cage made from glass fibre reinforced polyamide	7206-B-XL-TVP
TVP2	Solid window cage made from glass fibre reinforced polyamide PA66	N212-E-XL-TVP2
TVPB	Solid window cage made from glass fibre reinforced polyamide, guidance on inner ring	21305-E1-XL-TVPB
UA	Universal design for fitting in pairs, bearing pair has small axial internal clearance in O and X arrangement	7318-B-XL-JP-UA
X	External dimensions matched to international standards	31330-X
XL	"X" Life Design	30226-XL
Z	Gap seal on one side	6200-Z

Notes:

- These prices represent the maximum price (inclusive of all taxes) to be charged by our Authorised Industrial Distributors / Channel Partners
- Our Authorised Industrial Distributors / Channel Partners are free to sell at prices lower than these prices
- The price list is effective from 1st April 2019 and supercedes all previous price lists issued by us
- These prices are subject to change without prior notice

info +

▲ NEW TRAINING COURSE: INTRODUCTION TO INDUSTRY 4.0

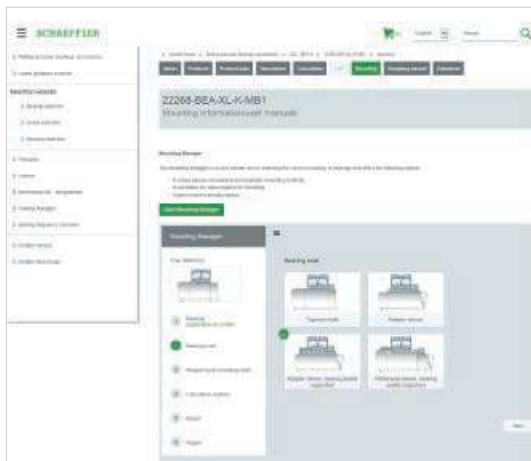

Schaeffler can prepare you for digitalization in industry. This is why we have added a new training course to our range – and it requires no previous knowledge. The training course “Modern plant monitoring – shape your own Industry 4.0 future” focuses on the following areas:

- What should be done during the planning phase?
- Monitoring strategies and techniques
- Vibration analysis with live measurements
- Standardized data and information management
- Cost / benefit analysis

If you want to support your customers in the establishment of digital processes as part of condition monitoring for their machines and facilities, then be sure to register now. The number of places is limited.

For information, consultation, and registrations, contact:
Sabine.Fleischmann@schaeffler.com, phone +49 241 9149-8016

▲ Two paths to choose from: You can use *medias* as a starting point and obtain bearing-specific assistance in your mounting process, or use the stand-alone version and start by selecting your bearing at www.schaeffler.de/en/mounting-manager

▲ NOW EVER CLEARER: THE NEW MOUNTING MANAGER

You may already be familiar with it from our *medias* platform – or perhaps you use our “Mounting Manager” online tool itself? Many Schaeffler customers have been taking advantage of the numerous options provided by this calculation and instruction program to assist them in their day-to-day work for many years.

What is new? The most important thing: The Mounting Manager now features even clearer user navigation, besides which its functions have been completely revised. This means that obtaining the correct mounting recommendations is now even quicker and easier than before. Our tool provides convenient assistance in selecting the correct bearing mounting method – regardless of whether mechanical or hydraulic mounting processes are involved. Whether it is used as a stand-alone system or accessed via *medias*, the program calculates the exact data required for minimizing the radial internal clearance and for the displacement and starting pressure in the mounting process. What is more, you also receive useful mounting instructions and a list of necessary tools and accessories.

At the same time, we are working to further improve additional auxiliary online software solutions, so stay tuned for more publications over the next few weeks and months.

Eliminating Product Piracy

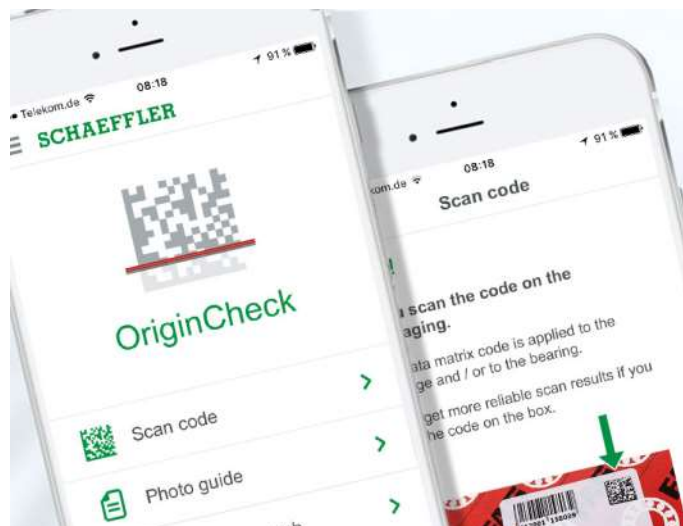

Schaeffler Origin Check App

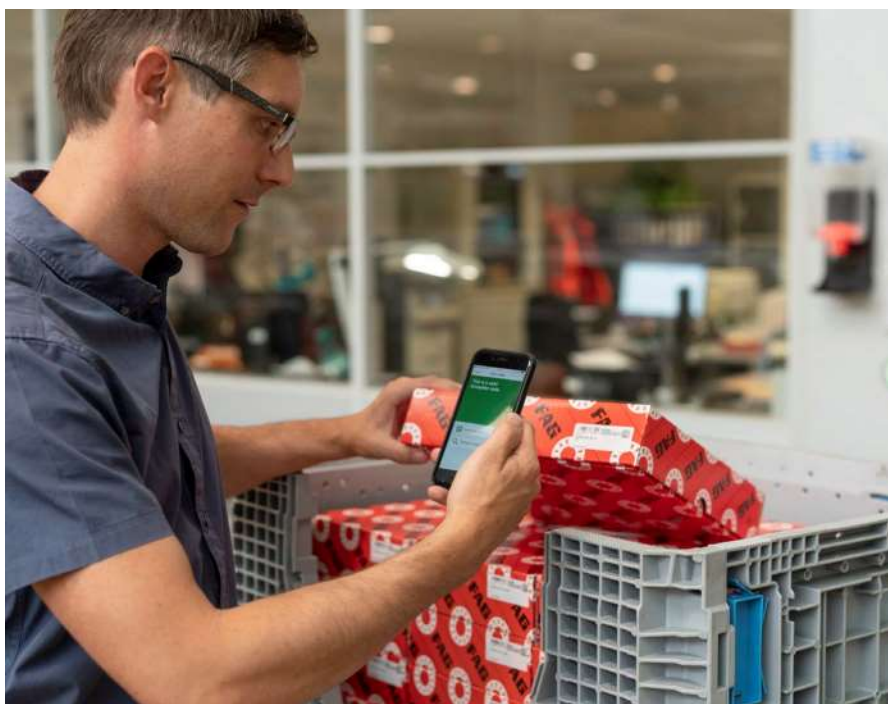

The Schaeffler OriginCheck app enables you to check data matrix codes directly on bearings or their packaging. The scan checks the code in real time and the user immediately receives a confirmation of the authenticity of the Schaeffler Data Matrix Code.

This app allows buyers of INA and FAG products such as rolling bearings to carry out initial authenticity checks both quickly and easily, and initiate further steps to obtain proper clarification without complications if any suspicion arises.

A detailed photo guideline gives the user a clear picture of how reliable photo documentation can be obtained. If a product is suspected to be not original, the user can take our guide to create photos of the product and send them directly to the Schaeffler brand protection team.

The integrated distributor search allows the user to quickly and intuitively find and contact the nearest authorized Schaeffler distribution partner.

The OriginCheck app is available free of charge for iOS and Android operating systems in German and English: www.schaeffler.com/en/apps

The most important functionalities for the user of the Schaeffler OriginCheck app are:

- Increased protection against product piracy through data matrix code verification
- Direct contact with Schaeffler in case of suspicion of counterfeiting
- Search function for authorized distribution partners

Counterfeits - Their Cost & Dangers

Counterfeiting is the act of imitating an article or product with the intention of deceptively reaping financial gain. Depending on the extent of the imitation, the fake product may be packaged and sold at par with the original or may be sold at a cheaper price. In either case, the fake products would have been created using poor-quality material and cheaper manufacturing processes than the originals.

Today counterfeiting of recognised brands such as FAG Bearings is widespread and increasing. The economic damage resulting from such counterfeits is difficult to quantify. In addition to significant loss of image and sales, legitimate brands also incur enormous costs arising from the investigation, seizure and professional disposal of counterfeits. It also affects the companies who install such fake components, and the customers who eventually use them.

Only Authorised Distributors guarantee genuine products.

What seems to be a cheap bargain can soon turn out to be an extremely expensive mistake.

How to get genuine FAG bearings?

Buy bearings from Schaeffler Certified Distribution Partners only.

Warehouse Inspection

Schaeffler Sales Engineers's services can be requested for warehouse inspections of your bearing stock at a minimal cost. Schaeffler will furnish a detailed inspection report.

Should you need such services, please contact Schaeffler India offices directly.
